

CRU DCmini Recommended HDD List

Date: 10/23/14

If a USB 2.0 Port is required to power the DCmini Cartridge, the following disk drives are recommended.

Western Digital

WD10JPVX

WD5000LPVX

Toshiba

PH2100U-1I54

PH2050U-1I54

Seagate

ST500LT012

*CRU does NOT recommend using Western Digital Black Drives where USB2.0 bus power is required to power the device. The WD Black drives require 1.15A at 5VDC power. Standard USB2.0 ports provide 5VDC at 500mA - less than half of the power required by the WD Black drive.

**The CRU DCmini Cartridge uses “pin-11 drive activity” to control the LED when the DCmini is docked. As such, the active LED will only blink if the HDD provides “drive activity” on pin-11. Not all models of HDD provide “drive activity” on pin-11. Please check with the HDD manufacturer or specification.
