Ditto DX vs. Ditto

A quick comparison of CRU's high performance digital forensic drive imagers

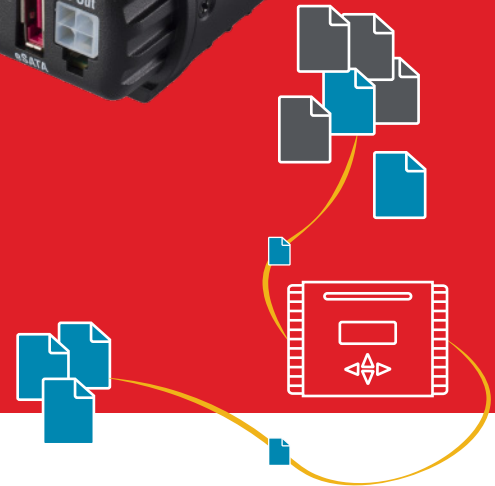

Ditto DX

Our latest drive imager offers 2x performance for Logical Imaging and physical imaging from SSD to SSD. Ditto DX also has native USB 3.0 support as well as a refined UI. The new multi-colored light bar indicates Ditto DX's status at a glance.

Logical Imaging for an 8 TB world

Standard with Ditto DX and the original Ditto is Logical Imaging – the ability to image a drive for specific file types – which is rapidly becoming essential for digital investigators. In a world where 8 TB drives are becoming increasingly more common, investigators can't waste time or energy imaging an entire drive. And now with Ditto DX, Logical Imaging will take half the time.

The original Ditto

With the release of Ditto DX, there's now a Ditto for everyone. While many investigators will prefer Ditto DX, the original Ditto still offers the performance and capabilities that made it such a success – while remaining highly affordable. Depending on your needs and workload, Ditto may be the perfect fit for you.

You can compare the performance of Ditto and Ditto DX yourself in our live online demo at: cru-inc.com/dittodemo
